

Advanced International Training Programme Opportunity

ECOLOGICAL SANITATION

The overall objective of the training programme is to disseminate knowledge and to develop skills for alternative sanitation options to support urban dwellers to reduce human health risks, to enhance people's nutritional status, to increase biomass production, and to protect water resources and other environmental assets.

Ecological sanitation (ecosan) is an eco-systems based approach to sanitation. It is multi-disciplinary in character and includes cultural and social desirability, human health, greywater treatment, safe processing of human excreta, protection surface and ground water, financing, technical performance, community involvement, social marketing, partnership-formation, policy development and related institutional issues, etc. Ecosan implies closing of water and nutrient cycles within the wider context of households, freshwater management and agriculture/ biomass production.

For details re target group, target counties, content, conditions and schedule kindly refer to: www.ecosanres.org or www.sei.se.
